## WATERPROOFING

For waterproofing connections or fixing down strips or channeling, LEDstuff recommends using Selleys Roof & Gutter Translucent. We have trialed many different silicone adhesives and have found this is the best for overall adhesion and lasting in the weather. Available from the major hardware supply stores such as Bunnings and Mitre10.

### Waterproofing Tips:

- Make sure any heatshrink tubing you are using is ready to slide into place over the connection. Make sure the tube is long enough to cover the connection with a little to spare.
- Check that your connection of any power sources is working just before you silicone - it's very frustrating to get to the end and find out its not working!
- Place the silicone around the join – both around any tightening threads or jackets.
- Let the connection sit for 24 hours before installation to let the silicone inside set and allow the connection to become robust.
